Circuit BBMPulser 4B (Basic) | Bob Beck Magnetic Pulser

In 1996 Dr Beck improved his design by replacing the relays in his original circuit with an integrated circuit, making it solid state and more durable. The unit runs on 3 of 9V PP3 batteries (total 27V) and delivers approximately 100 milliamps to the skin above the radial and ulnar arteries on one wrist via two short electrodes.

My Home-Made Bob Beck Magnetic Pulser

Bob Beck, The Inventor Although an old and established technology, magnet therapy and pulsed electromagnetic fields weren't an easily accessible option for most people until the 1990s. The Beck magnetic pulser came about as a result of the work of Bob Beck, who was looking for a companion method to complement his blood electrification unit.

Magnetic Pulsing and the Bob Beck Protocol

The power indicator circuit consists of a bicolor (Red-Green) LED (LED1) and the series combination of two 18 Volt Zener diodes, D1 & D2, with power limited by C2 (22uF, 35 Volt). This section of the device is automatically disabled when the 3.5mm plug is inserted into its jack. Therefore the LEDs flash only when batteries sum is over ~21 Volts.

Dr Beck designed a magnetic pulser to treat infected lymph glands and other sites of infection, tumours and other parts of the body with poor blood supply. A strong but very short magnetic pulse (20 K Gauss or higher) induces a tiny current in the cells and body fluids up to 10 or 20 cm into the body.
