Don't let anger harm your health, career, and relationships: " No individual—not even Freud himself—has had a greater impact on modern psychotherapy. " —Psychology Today Anger is universal. Unchecked, it can cause lasting damage in our lives: wrecked relationships, lost jobs, even serious disease. Yet in these increasingly stressful times, all of us have acted in anger—and often wished we hadn't. Is there a way that really works to solve problems and assert ourselves without being angry? The answer is a resounding yes, if you follow the breakthrough steps of Rational Emotive Behavior Therapy (REBT). This proven approach, developed by world-renowned psychotherapist Dr. Albert Ellis, has withstood the test of time, helping countless people deal effectively with emotional problems. Using easy-to-master instructions and exercises, this classic book will show you how to apply REBT techniques to understand the roots and nature of your anger, and take control of and reduce angry reactions. Here you will discover: The rational and irrational aspects of anger Special insights into your self-angering beliefs How to think, feel, and act your way out of anger How to relax How to accept yourself with your anger . . .and much more that will help you challenge and eliminate the anger that can frustrate success and happiness at home, at work, anywhere.

The Renaissance, the Reformation, the Enlightenment - these seismic developments in Western thought were not confined to Italy and her near neighbours, but were paralleled across the vast and culturally diverse territory stretching from Vienna to Constantinople. Drawing on an array of sources, many of which were little-known before he made this ground-breaking study, Victor Neumann charts the development of Eastern European thought and its literary and artistic expression from the Middle Ages to the modern age. First published, to great acclaim in Romania in 1991, this newly revised, updated and illustrated edition has been published as Neumann's home city of Timosara prepares to receive visitors from across the world as European Capital of Culture, and at a time when the question of what it means to be European is being debated more than ever. AUTHOR: Victor Neumann is a Romanian historian, political analyst, and professor at the West University in Timisoara. He is a well-known specialist in the recent cultural and intellectual histories of Eastern and Central Europe. Much of his work deals with Conceptual History, Jewish-Romanian history, the history of anti-semitism, as well as various topics connected with nationalism. Since 2013 he has been Director of the Timisoara Museum of Arts. SELLING POINTS: \* A newly illustrated and revised edition of Victor Neumann's ground-breaking study into the development of Eastern European thought \* Given new relevance by the current debate surrounding European identity \* Published as part of the build-up to Timisoara's appointment as European Capital of Culture in 2021

Even though more than half the world's population is bilingual, the study of bilinguals has lagged behind that of monolinguals. With this book, which draws on twenty-five years of the author's research, François Grosjean contributes significantly to redressing the balance. The volume covers four areas of research: the definition and characterization of the bilingual person, the perception and production of spoken language by bilinguals, the sign-oral bilingualism of the Deaf, and methodological and conceptual issues in research on bilingualism. While the author takes a largely psycholinguistic approach, his acute linguistic and sociolinguistic awareness is evident throughout and especially so in his reflections on what it means to be bilingual and bicultural. The book also defends increased co-operation among researchers in connecting fields such as the language sciences and the neurosciences.

How does a child become bilingual? The answer to this intriguing question remains largely a mystery, not least because it has been far less extensively researched than the process of mastering a first language. Drawing on new studies of children exposed to two languages from birth (English and Cantonese), this book demonstrates how childhood bilingualism develops naturally in response to the two languages in the children's environment. While each bilingual child's profile is unique, the children studied are shown to develop quite differently from monolingual children. The authors demonstrate significant interactions between the children's developing grammars, as well as the important role played by language dominance in their bilingual development. Based on original research and using findings from the largest available multimedia bilingual corpus, the book will be welcomed by students and scholars working in child language acquisition, bilingualism and language contact.

*Limbajul, ca funcție psihică specific umană, se află la confluența mai multor discipline, printre care filosofia, psihologia, neurobiologia, psihopedagogia specială, logopedia. Tulburările sale, fie că sunt de natură organică, funcțională sau psihologică, restrâng capacitatea de comunicare a individului și, implicit, viața lui socială. În cartea de față, pornind de la modelele explicative ale tulburărilor de limbaj și prezentând metode de evaluare și intervenție a căror eficacitate a fost demonstrată științific, autoarea realizează o deschidere spre tulburările emoționale, comportamentale, de învățare și nu numai, încadrându-le în contextul mai larg al mentalului uman. Propunând direcții concrete de evaluare și intervenție în cazul unor tulburări ale limbajului precum dislalia, bălbăiala, rinolalia, dizartria, afazia, tulburările de voce, întârzierea în dezvoltarea limbajului, această carte are o importanță latură practică, îmbogățind literatura de specialitate printr-un demers inovator și binevenit.*

*Assessment of Young Children focuses on the best practices and tools for assessing children from infancy through eight years. The text helps the reader use assessment results in program planning and monitoring progress.*

*In the first decade of life, children become bilingual in different language learning environments. Many children start learning two languages from birth (Bilingual First Language Acquisition). In early childhood hitherto monolingual children start hearing a second language through daycare or preschool (Early Second Language Acquisition). Yet other hitherto monolingual children in middle childhood may acquire a second language only after entering school (Second Language Acquisition). This Element explains how these different language learning settings dynamically affect bilingual children's language learning trajectories. All children eventually learn to speak the societal language, but they often do not learn to fluently speak their non-societal language and may even stop speaking it. Children's and families' harmonious bilingualism is threatened if bilingual children do not develop high proficiency in both languages. Educational institutions and parental conversational practices play a pivotal role in supporting harmonious bilingual development.*

*The Science of Living*

*How Children Learn*

If you would like your children to experience the benefits of becoming bilingual, but you aren't sure how to teach them a second language, then Raising a Bilingual Child is the perfect step-by-step guide for you. Raising a Bilingual Child provides parents with information, encouragement, and practical advice for creating a positive bilingual environment. It offers both an overview of why parents should raise their children to speak more than one language and detailed steps parents can take to integrate two languages into their child's daily routine. Raising a Bilingual Child also includes inspirational first-hand accounts from parents. It dispels the myth that bilingualism may hinder a child's academic performance and explains that learning languages at a young age can actually enhance a child's overall intellectual development.

The Science of Living (Published in 1930) looks at Individual Psychology as a science. Adler discusses the various elements of Individual Psychology and its application to everyday life. This book includes sections on the inferiority complex, the superiority complex, and other related aspects like love, marriage, sex and sexuality, and the education of children. Concrete, particular, unique human beings are the subjects of this psychology, and it can only be truly learned from the men, women and children we meet. The supreme importance of this contribution to modern psychology is due to the manner in which it reveals how all the activities of the soul are drawn together into the service of the individual, how all his faculties and strivings are related to one end. This is an important book in the history of psychoanalysis and Adlerian therapy.
